

Turnaround Execution

Turnaround leaders are tasked with delivering streamlined operations in a challenging climate. Leaders are pressured to deliver more turnarounds per year, with less time available to plan and execute each event. Turnarounds are complex and difficult to manage, requiring major capital outlays, and even a small miss can put operators at risk. Increasingly operators face additional slowdowns and headaches as they are forced to rely on less experienced contractors as experienced team members reach retirement age.

Outdated paper-based processes cost time and money. What if you could save the business millions per year by improving turnaround execution?

- Ensure startup date commitments for customers.
- Automate turnaround tasks to reduce non-productive time and end paper tracking.
- Meet your forecasts with real-time access to performance and task completion data.
- Increase collaboration, show a full audit history of who is doing what, when, and why.
- Integrate with SAP, Oracle Primavera, Microsoft, and more.

Shave hours off turnaround events while reducing the risk of project slippage and unscheduled outages. Ensure relevant information is right there, when it's needed most... from your systems of record and your project management software, available on every workstation and mobile device.

This is all possible...with Appian.

With a single, unified platform, proven security and a powerful and intuitive user interface, turnaround coordinators and managers can address their most pressing challenges:

Automate: Eliminate paper task lists and spreadsheets. Reduce non-productive time and optimize resource allocation by converging process, packages, inspection plans, and schedules at scale.

Integrate: Maximize data access without the complexity commonly tied to integration efforts.

Collaborate: View worker tasks and actions, add photos and markup diagrams, all from an intuitive user interface while enabling supervision and sign-off on completed work.

Enable Mobility: Provide critical employees immediate access to performance metrics, activities, and work anytime on any device.

Report: Automatically report work progress, saving time and effort, and automatically feed reports into master planning software.

Prioritize.

Business is at a crossroads. Why waste valuable time and resources tracking with paper and Excel? Prioritize your efforts to execute faster and safer. Streamline operations and improve turnaround execution. With Appian, you can:

- Increase productivity of your turnaround workforce.
- Ensure better access to data in real time, when and where you need it.
- Improve task orchestration to reduce asset downtime during turnaround events.

Focus.

Take control of performance with the Appian application platform, a powerful yet easy to use platform for managing complex business processes.

Quickly build and deploy enterprise apps for:

- Asset management
- Refinery turnaround
- Commodity management
- Revenue management
- Customer management
- Safety and compliance
- IT operations

Prepare for the future.

Pressure is mounting to deliver efficiency in the energy sector. Alleviate the pressure with Appian. Streamline operations, reduce costs, facilitate collaboration, and navigate change.

Unify relevant information and systems to get work done with Appian. Achieve significant efficiency in work execution while leveraging your legacy IT investments.

Appian allows us to respond more quickly in a complex environment.

– Global Energy Company

Companies from across the energy sector trust Appian.
