

Appian and Guidewire

Create custom applications and workflows connected to Guidewire InsuranceSuite.

Our digital world is faster, smarter, and more connected than ever. So it's no surprise that customers expect rapid, digital-first experiences across all areas of their life—and insurance is no exception.

To win in today's marketplace, you need a trusted technology platform that helps you move faster right away. That's why Appian has joined Guidewire's PartnerConnect program.

Appian + Guidewire

Appian has been building solutions to address insurers' top process challenges for more than a decade. With the Appian Platform, insurers can accelerate digital modernization with data, AI, and automation to quickly deliver the seamless insurance experience customers demand.

Guidewire InsuranceSuite combines policy administration, billing, and claims management in an agile platform that P&C insurers trust. More than 500 insurers in 38 countries, from new ventures to the largest and most complex in the world, run on Guidewire.

Together, Appian and Guidewire empower insurers to unify their data and quickly build applications to keep pace with a changing market.

Reimagine your underwriting, claims, and billing processes.

Insurers today are inundated with submissions and information from multiple data sources, slowing down work and causing inefficiencies.

Appian and Guidewire InsuranceSuite change that. With the combined power of these platforms, insurers can:

- **Increase speed to quote.** Significantly reduce underwriters' turnaround times with a single view of all relevant data.
- **Improve risk management and quote-to-bind ratio.** Leverage third-party data and AI to better determine potential risk, increasing quote-to-bind ratio and improving profitability.
- **Improve workflow and case management.** Control submissions, risks, and claims with complete end-to-end visibility and dashboard reporting.

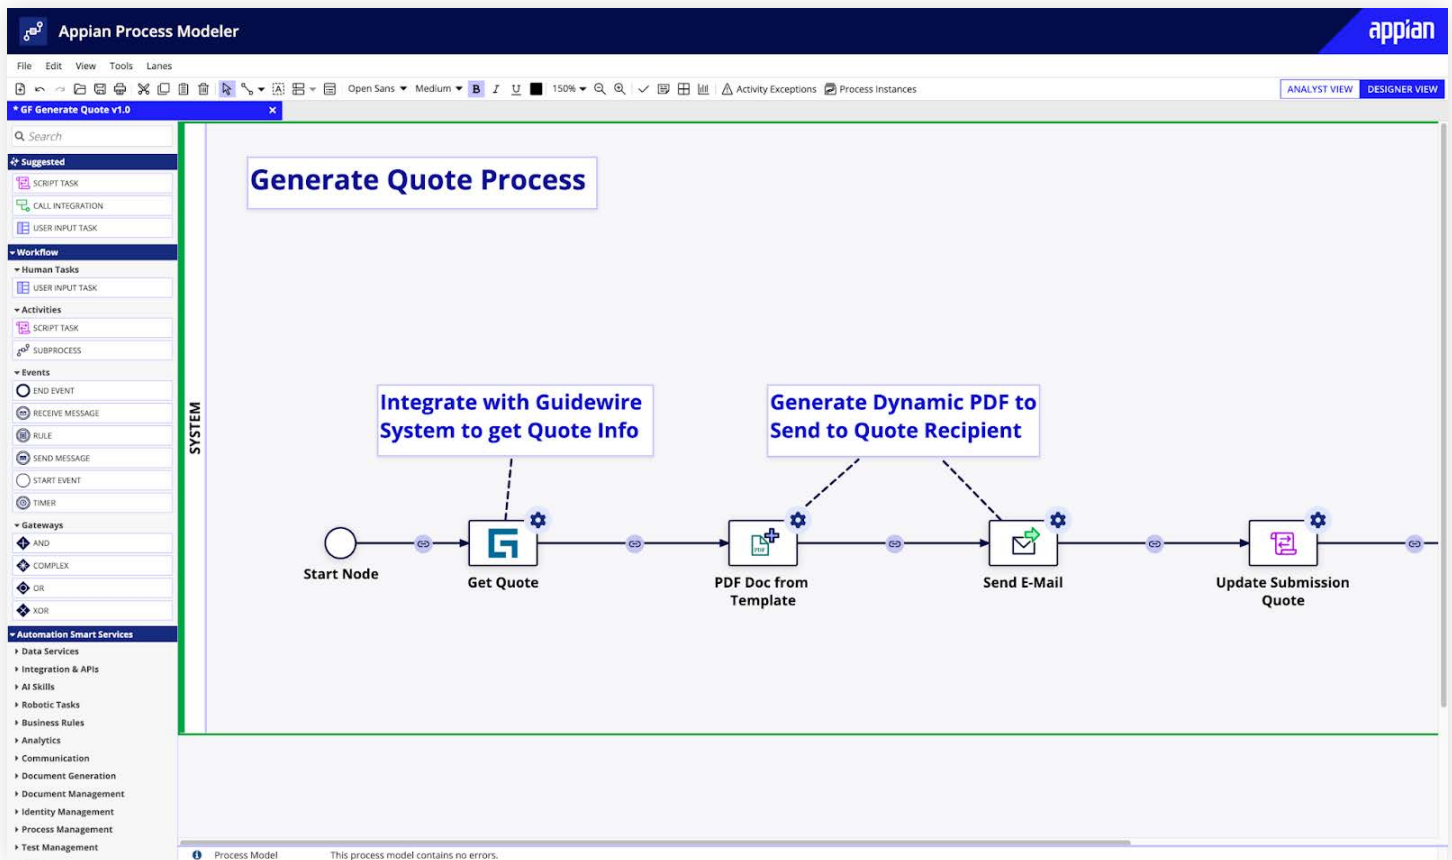

Benefits for developers.

- **Connect to the entire Guidewire InsuranceSuite.** That includes policy, claims, and billing. This integration is compatible with all cloud versions of Guidewire.
- **Save time with no-code integrations.** Easily configure an integration using sorting, filtering, pagination, and document support.
- **Eliminate manual updates.** Dynamically connect to the entire Guidewire API schema. When a new endpoint is created or modified within your Guidewire environment, your Appian connection can automatically update.
- **Visually combine multiple API calls.** Use the Appian Process Modeler to string multiple API calls together.
- **Avoid complex API calls.** Trigger a request by selecting from a list of operations instead of navigating complex API documentation.

Appian's prebuilt connectors to Guidewire InsuranceSuite allow developers to quickly connect and automatically update—saving hours of manual work.

Do more with Appian.

Beyond Appian's prebuilt connection to Guidewire, Appian's data fabric allows you to connect and unify your entire insurance ecosystem, so all your key data sources can be pulled into your Appian and Guidewire workflows and applications.
