

Dynamically create customer quotes and invoices, while accounting for current exchange rates, country tariffs, taxation laws, and customer-specific contract terms and pricing.

Focus.

Take an innovative approach to Logistics Management.

- Manage the shipment lifecycle end-to-end.
- Utilize mobile-enabled apps that allow end-users to complete processes on-the-go.
- Leverage barcode scanning and RFID to track shipments, trucks, etc.
- Dynamically generate pricing, invoices, and bills based on locations, contract discounts, and regional tariffs.
- Achieve regulatory compliance around global shipments with capabilities to handle complex rules, audit trails, approvals, and reporting.

Take control.

Using Appian, you can quickly build, deploy, and scale logistics applications, including:

- Cross-Docking Management
- Product and Lot Release
- Digital Driver Dispatch
- Scheduling and Route Planning
- Fleet Management
- Shipping Compliance
- Freight Tracking
- Track and Trace
- Load Management
- Transportation Management

Prepare for the future.

The future of logistics management is dependent on innovative solutions that improve productivity, optimize processes, and reduce costs. The Appian Low-Code Automation Platform can transform the way organizations are handling logistics.

With Appian, organizations can build web and mobile apps faster, run them on the Appian cloud, and manage complex processes, end-to-end, without limitations.

Deliver applications that will transform the way your teams work and impress your stakeholders, employees, supply chain partners, and customers—in as few as 8 weeks—with the Appian Guarantee.

Leading organizations are transforming logistics management with Appian.

Load Building and Tracking

A third-party logistics and freight company is using Appian for an application to manage load building and tracking within their logistics team, including assigning and monitoring loads, delivery status and routes, and on-time performance metrics.

Logistics Lifecycle Management

A leading shipping and logistics organization is using Appian to manage end-to-end logistics across generating invoices, actioning purchase orders, coordinating shipping services, warehouse tracking, and final billing and payment collection.

Digital Driver Dispatch

A leading supermarket chain is leveraging Appian for a mobile driver application that digitizes the driver check-in and load pickup at distribution centers, reducing driver turnaround time and improving 3PL invoice reconciliation.

Fleet Management

Ryder uses Appian to manage their rental operations across vehicle yard management, maintenance and condition assessments, inspections, accident claims processing, and contracting. Ryder has seen a 50% reduction in truck rental transaction times.
