

Appian Government Off-the-Shelf (GOTS) Products Accelerate Application Deployment at the DoD

You've heard of commercial off-the-shelf software, or COTS. Now there's GOTS: government off-the-shelf applications developed to meet the specific needs of government agencies and easily shared and adapted to meet other agencies' needs.

GOTS software complies with the federal government's directive to leverage existing investments in application development.

Benefits of Appian GOTS products include:

Lower cost. The software has already been developed and paid for by another department.

Quicker acquisition. Many GOTS applications qualify as sole-source procurement due to their uniqueness and reusability.

Faster time to deploy. Applications are proven and have received authorization to operate (ATO).

Alignment with government policy. The government is promoting shared platforms and common standards as part of its modernization directive.

Reusable by design: Appian composable, low-code software.

The low-code architecture and process automation and AI capabilities of the Appian Platform reduce development time by 90%, accelerate processes by 95%, and offer a return on investment in less than six months.¹

Organizations that have adopted a composable approach will outpace the competition by 80% in the speed of new feature implementation.

Gartner, Top Strategic Technology Trends

Appian's composable approach to software development—where workflows are designed using modular building blocks—helps the Department of Defense (DoD) meet its goal of reusing software across agencies and branches. Applications can be taken in whole or in part and incorporated into new workflows.

Composable applications improve productivity and scalability. They efficiently deliver reusable applications you can optimize and re-deploy quickly to meet your agency's needs.

"With the power of low-code process automation and a unified data fabric we are able to streamline processes and facilitate innovation. By leveraging existing technologies, we are also maximizing efficiency and shareability across the Department of Defense."

Steve Edsall, US Army Contract Writing System product lead at PEO EIS

Expedite your mission with modern applications and leverage government-off-the-shelf software.

Appian GOTS applications reduce time to deployment at the DoD:

Investigative case management.

Originally developed for the Air Force Office of Special Investigations (AFOSI), the Appian investigative case management application is being reused at another high-profile US federal defense agency.

Contract writing.

The Air Force CON-IT system built on Appian was adopted across the DoD, including by the US Army whose Army Contract Writing System (ACWS) was deployed in just 23 weeks and is ushering in a new era of efficiency.
